

**Criteria for maintaining the list of manufacturers of
Concentrating Solar Systems**

- i. The company is manufacturing solar concentrating collectors/ dishes as per the technical specifications laid down by MNRE and it has got its collector /dish tested at one of the Regional Test Center (RTC) of MNRE. In case the testing gets delayed, the system installed by the company in field is inspected by a team deputed by MNRE and it submits a satisfactory report. The report from RTC should, however, follow.
- ii. The company is registered under company's act and submit its relevant documents to MNRE
- iii. The company has a well established manufacturing facility for concentrating collectors with required machinery, fixer zigs, tools, test equipment etc and has qualified engineers/ technicians trained in manufacturing/ fabrication
- iv. The owner of the company or his associate Director/ Partner must be a technical man having knowledge of technology and experience in fabrication, installation and testing of concentrating collectors
- v. The manufacturing facility of the company is visited by a team deputed by MNRE once in a year or so and it submits a satisfactory report. The visit will be on a very short notice; 2-3 days in advance.
- vi. The company provides data as regard to its installations, manufacturing facilities etc. as and when required by MNRE.

Based on above information, list of manufactures will be revised every year and placed on MNRE website.

Note : New proposals submitted by the manufacturers may also be considered for direct support to beneficiaries if he provides the details of his installations during last 5 years with status of their functionality & user satisfaction
